

Commodity Markings

New Locations for Commodity Markings

Improving access to some tank car markings has prompted an AAR requirement to locate certain markings in a new lower position. Affected marks include:

- ◆ commodity
- ◆ inhalation hazard
- ◆ permits and exemptions

Under the AAR requirement, the maximum height for the marks is seven feet above the rail. In their new position, markings will be applied to the left of or below, the qualification markings. There will be a gradual change to marks in the new location as cars are qualified and repainted.
